

Know what you are planting!

Be

SEED
SMART

A seed test is the best way to predict seed performance, and ensure your farm is using the highest quality seed possible. You can be SEED SMART by following these simple steps:

Take a representative
sample

Submit it to one of
Alberta's seed labs

Get a full report on
the total health
of your seed

Today's seed testing technology can provide a wealth of information about your seed, including these important indicators:

- 💡 **Germination:** Expected performance under ideal conditions
- 💡 **Vigor:** Expected performance under field conditions
- 💡 **Disease screening:** To identify seed borne diseases that can affect seed performance

Only a complete seed test can help determine if your seed will reach your yield goals, or if it's time to source new seed for the upcoming year.

Farmers can contact their local seed cleaning plant to submit a sample. For information on seed testing, farmers are urged to contact:
