

# *Know what you are planting!*

Knowledge is Power! Using seed test results as part of a crop management program is key to maximizing potential economic yield.

Using farm saved seed? — Get a test from an accredited seed lab.

Purchasing pedigreed Seed? Ask for the full seed test analysis from your seed retailer.

A seed test is the best way to predict seed performance,  
and ensure your farm is using the highest quality seed possible.

You can be **SEED SMART** by following these simple steps:

-  Take a representative sample
-  Submit to one of Alberta's seed labs
-  Get a full report on the total health of your seed

A seed test is the best way to predict seed performance,  
and ensure your farm is using the highest quality seed possible.

Today's seed testing technology can provide a wealth of information about your seed,  
including these important indicators:

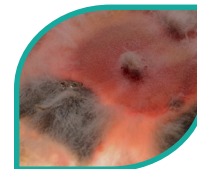

**Germination:** Expected performance under ideal conditions

**Vigor:** Expected performance under field conditions

**Disease screening:** To identify seed borne diseases that can affect seed performance
